

Connected Accounts

Build a Connected Accounts page with card-based sections.

Sections:

1. Email
2. SMS

Each section should support 3 states:

- Not connected
- Connected
- Error / needs action

Email card:

- show connected email
- show sending/receiving status
- show DNS or verification issues if any
- buttons: connect, reconnect, disconnect

SMS card:

- show phone number
- show sending/receiving status
- show 10DLC approval status
- buttons: connect, manage, disconnect

Also include:

- clear status indicators (active, warning, error)
- default sending channel selection (email + SMS)

Important:

Allow users to adjust dns if needed let them know if it's connected or not properly

- if email is connected, do not allow switching to personal Gmail
- errors should show clear fix actions
- DNS verification checks:
 - SPF record exists
 - DKIM record exists
-
- Poll DNS every X seconds OR on button click
- Store verification status:

- pending
 - verified
 - failed
-
- Update UI dynamically

Logout

For default sending channels remove the arrows and have the system auto show connected accounts so if there is only one user on account show there email and number connected. If they are a team and have multiple members then the arrows should pop up to show more connected accounts
