

Update Leads page to include:

1. Top summary cards:
 - **Total leads** - Tracked by how much leads user has
 - **New today** - Tracked by how much new leads were added within last 24 hours
 - **Hot leads** - A lead is considered HOT if: they have sent an inbound message within the last 24 hours OR they have an appointment scheduled or in progress
 - **Contacted percentage** - calculated the percent of database user has contacted

Name

Full name with email/number underneath if only have email or number entered for lead info so implement email or number but if they have both implemented make sure both appear under leads name

Filter bar:

Include:

1. Stage (multi-select)

- New
- Warm
- Hot Prospect
- Nurture
- Cold/ost

2. Source (multi-select)

Source options:

- Open House
- Social Media
- Website
- Referral
- Zillow
- Other

3. Budget

Price

- predefined ranges (e.g. \$300k–\$500k if you can show like shadowed text so user can see to fill in then they enter actual amount)
- custom min/max input

4. Area (multi-select)

For MVP, We should allow users to create general/custom areas :

Examples leads enter areas

- Sherman Oaks
- Beverly Hills
- Dallas North

- Miami Beach
- Investors / Out of Area, etc

Leads should be assignable to an area by:

- CSV import
- manual lead creation
- lead edit
- bulk update

when completing bulk update they should be able to send to certain users based on tags or click on users 1 by 1 or select all

Area filter should use these user-defined areas.

5. Last activity

Show when lead was last contacted

Add status and actions to the right side like the image above

6. Status (multi-select)

- Not Contacted
- Contacted
- Replied
- Appointment Setup
- Closed

All filters should:

- support multi-select where applicable
- update results in real-time
- work together (combined filtering)

Do not add notes as a standard filter dropdown.

Instead:

- Include notes in global search (search inside note content)
- Add a filter toggle: “Has Notes” / “No Notes”
- (Optional) Add filter for “Last note date”

Goal is to keep filters clean but still allow powerful searching.

Status : Message

Actions : Mark Hot

Table improvements:

- add action buttons (message, mark hot)

Core logic:

1. If a lead is marked as hot:
 - Show a visible Hot badge next to the lead name
 - Primary action should be “Message”
2. If a lead is not hot and has not been contacted in 3 or more days:
 - Primary action should be “Message”
3. If a lead is not hot and was contacted within the last 3 days:
 - Primary action should be “Mark Hot”

Important:

Do not remove the other action completely.

Use:

- 1 primary visible action button
- Additional actions inside a small dropdown / overflow menu

Expected row behavior:

- Not contacted in 3+ days:
 - Primary button = Message
 - Dropdown can include Mark Hot
- Contacted within last 3 days:
 - Primary button = Mark Hot
 - Dropdown can include Message
- Already marked hot:
 - Show Hot badge next to name
 - Primary button = Message
 - Dropdown can include Remove Hot

Fields needed:

- last_contacted_at
- is_hot

Add Bulk actions:

- checkbox selection
- bulk mark hot
- bulk campaign add
- delete
- 1. View toggle:
 - table view
- 1. Visual improvements:
 - hot lead badge
 - status badges

Remove actions on top left screen near select all

Keep select all in same area as image example

Ensure all values are dynamically calculated from database

Add view toggle state for Leads page:

State:

- Table view don't add pipeline view not needed for mvp only include table view in same area as image without pipeline view beside

Default on Table View :

Table View:

- Show existing table layout no changes

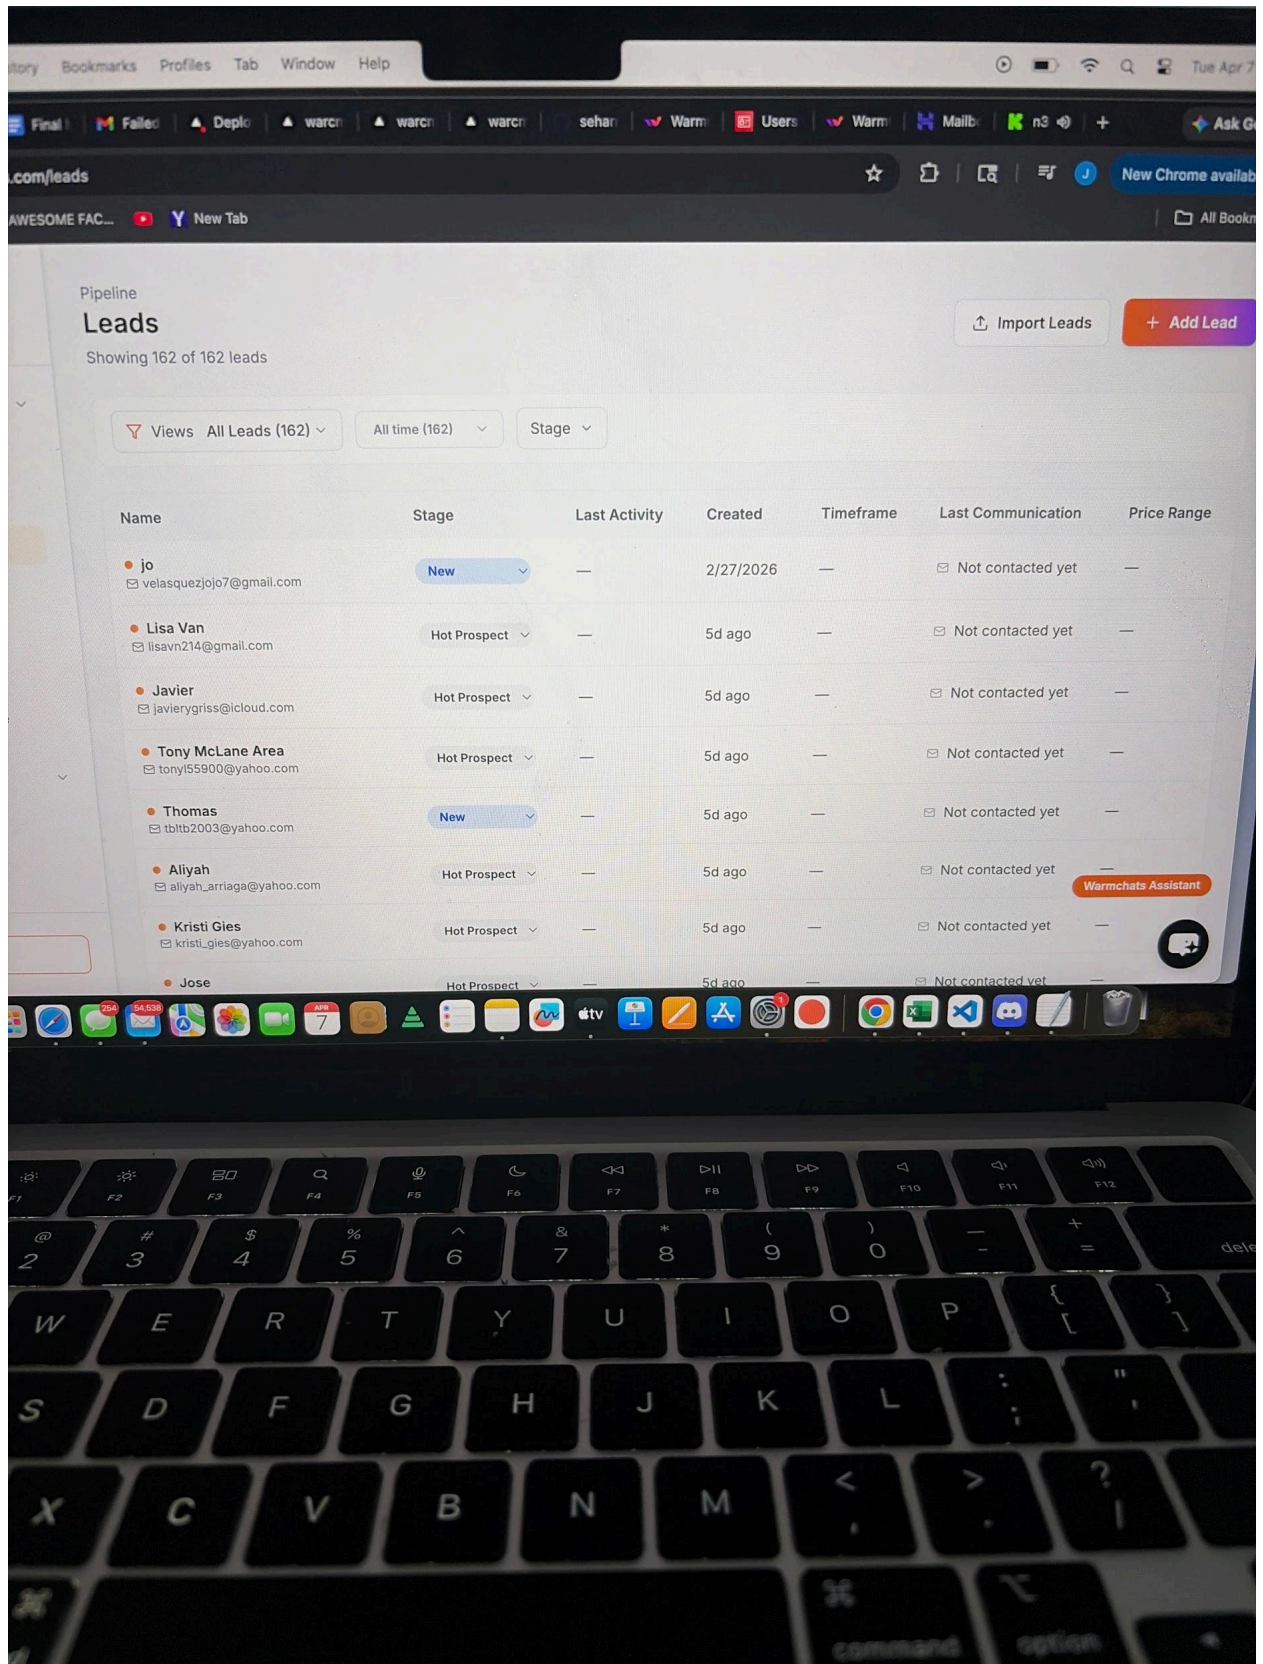

1st image is current leads page. 2nd Image below first image is example reference I want my leads page to look like
