

SMS Gating System (Required for Billing Control)

SMS must NOT be a free-send feature. It needs full gating.

Plan Access:

- Free plan → SMS disabled
- Paid plans → SMS enabled

Setup Requirement:

- User must complete 10DLC registration
- Only allow sending if:
 - sms_connected = true
 - campaign_status = approved
- 3. Usage Tracking

Track per user:

- sms_monthly_limit
- sms_used_this_cycle
- sms_overage_rate (default: \$0.015 per SMS)
- 4. SMS Sending Logic

Before sending ANY SMS:

- Check plan access
- Check SMS setup (approved campaign)
- Check usage vs limit

If any condition fails → block send

- 5. Overage Handling
 - Allow sending beyond plan limit
 - Track overage usage separately
 - Charge \$0.015 per additional SMS
- 6. UI Requirements
 - Show usage: "X / Y SMS used"
 - Show warning near limit (e.g. 80–90%)
 - Show pop ups suggesting user to upgrade plan once at 70%+ usage
 - Show estimated cost before sending if over limit
 - Show overage breakdown in billing
- 7. Safety Controls
 - Daily send cap (e.g. 1,000 SMS/day per user)

- Confirmation modal for large sends (bulk messaging)
8. AI Usage / Cost Control (Important)

We also need visibility into AI-related costs.

Please confirm:

- Cost per AI message (OpenAI or provider)
- Cost per generation (reply, campaign, etc.)

We need to:

- Define AI usage limits per plan
- Track AI usage per user
- Prevent unlimited usage that creates losses

Example:

- ai_messages_limit per month
- ai_used_this_cycle
- optional overage pricing or hard cap

Summary

System must enforce:

- 10DLC submission limits (1 per user)
- SMS gating (plan + setup + usage)
- Usage tracking + overage billing
- AI usage limits + cost control

Without these controls, we risk:

- duplicate carrier charges
- unlimited SMS costs
- AI usage losses
